

Education

Education

Cluttons project and building consultancy team specialises in providing services to the educational sector. As part of a multi-disciplinary practice, we are well placed to provide advice across the full range of building consultancy disciplines including project co-ordination, cost and management consultancy, planned maintenance, building conservation, dilapidation resolution, health and safety, and architectural design.

Educational clients include private schools, grammar schools, colleges and universities. Projects include external and internal refurbishments, often whilst still in occupation thus requiring detailed planning and co-ordination through to the preparation of planned preventative maintenance schedules on a variety of buildings ranging from 17th century colleges to 20th century campus buildings.
